Introduction

Grazing4AgroEcology (G4AE) is an EU-funded project aiming to restore farmer confidence and that of the agricultural industry in the production performance and competitiveness of grazing by promoting agroecological innovations for sustainable grazing management.

Methodology

In G4AE, grazing farmers are for the first time at the centre of a thematic network in providing solutions for sustainable, integrated grazing-based animal production systems.

Objectives

1. Implement a new approach to assess and optimise grazing-based farming in an integrated way based on agroecology.
2. Capture the practice needs, tapping and sharing best agroecological grazing practices via a partner-farm network and surveys.
3. Strengthen the grazing AKIS by implemmenting a cross-border infrastructure for co-creation, collaboration, cross-fertilisation & knowledge-exchange.
4. Implement a Knowledge & Information Management System to persistently converge and sustainably deploy know-how and innovations.
